

Jeet Patel

AI/ML & BACKEND ENGINEER

AI/ML & Backend Engineer who has shipped a live AutoML platform benchmarking 56 algorithms across 256 model configurations, a real-time multi-camera attendance system, and production REST APIs. Seeking an AI/ML or Backend Engineering internship.

Education

L.J. Institute of Engg. & Tech. (LJIET) | 2025 – 2028
B.E., Computer Engineering, Ahmedabad, Gujarat

Darshan University | 2022 – 2025
Diploma, Computer Science, Rajkot | CGPA: 9.19

Skills

Languages: Python, TypeScript, JavaScript, SQL
AI/ML: Scikit-Learn, XGBoost, LightGBM, Pandas, NumPy, OpenCV
Backend/APIs: FastAPI, REST, WebSocket, JWT
Databases: MongoDB, Firebase, MSSQL
Frontend: React, Tailwind CSS
Tools: Git, Docker, CI/CD, GitHub Actions
CS Fundamentals: DSA, OOP, DBMS

Work Experience

- Udanix.com** | Backend & API Developer (Freelance) -- Remote Aug 2025 – Feb 2026
- Engineered a booking-system backend in **FastAPI** with **Firebase**, building availability and slot-conflict logic that powers live reservations for a travel platform.
 - Integrated **3 third-party REST APIs** (scheduling, payments, notifications) with retry/timeout handling, and authored **OpenAPI/Swagger** docs that cut back-and-forth QA cycles with the client.
- D'Furn India** | ERP Developer -- Ahmedabad, India Feb 2026 – May 2026
- Shipped inventory, order-management, and reporting modules (**React + MSSQL**) for an internal ERP, replacing manual spreadsheet tracking for the operations team.
 - Modeled MSSQL schemas and backend logic from ambiguous business requirements, iterating directly with non-technical stakeholders across multiple review cycles.

Projects

- Nexora** | Python, FastAPI, React, Scikit-Learn, XGBoost | [Live](#) · [GitHub](#) 2025 – 2026
- AutoML platform: turns a raw CSV into a deployable model via a **56-algorithm** registry (sklearn, XGBoost, LightGBM, CatBoost) expanding into **256 configs**, ranked live on a WebSocket leaderboard.
 - Designed authenticated inference APIs (sync + batch) in **FastAPI**, deployed via GitHub Actions CI; tuned the embedded Ollama assistant to respond in under **90 seconds**.
- Eye-X** | Python, FastAPI, MongoDB, WebRTC, YOLOv8-Pose | [GitHub](#) 2025
- Built a dual-camera pipeline: gate frames run through YuNet + **InsightFace/ArcFace** matching; classroom frames classified via **YOLOv8-Pose** keypoints in a deterministic state machine, not a black box.
 - Relays frames from gate/classroom nodes over WebSocket and **WebRTC** (aiortc) into a FastAPI signaling server, persisting recognition and behavior events to MongoDB for live dashboards.
- Virtual Hand Controller** | Python, MediaPipe, OpenCV, PyAutoGUI | [GitHub](#) 2025
- Hardware-free input device: **MediaPipe**'s 21-point hand-landmark model drives real-time mouse and keyboard control through PyAutoGUI, letting a webcam replace a physical controller.

Achievements

- Oracle Cloud Infrastructure 2025 Certified DevOps Professional** – Oracle (Sep 2025)
- NASA International Space Apps Challenge 2025 – Galactic Problem Solver** (Oct 2025)
- Published nexora-prediction on PyPI** – pip-installable AutoML package from the Nexora project (v0.1.1, Jun 2026)
